

Questions for consideration:

- What do you believe is the most important science and technology issue facing Canada in 2017?
- What do you see as the value of scientific evidence for informing decision-making at the federal level in Canada?
- How would you address the concerns and recommendations raised by the Federal Review of Fundamental Science (the Naylor Report)?
- How would you ensure government decisions are based on the best available evidence?
- Do you believe that the role of scientific evidence in federal decision making needs to be strengthened? If you do, how would you go about doing so?
- Do you believe that current levels of federal support for public science are sufficient to meet the federal government's responsibilities?
- If not, what will you do to increase public science capacity at the federal level?
- What are the most pressing changes or updates necessary to science policy and/or funding in Canada?
